

OPERATION 99 FRESNO

August 2001

- Project Purpose:** State Route 99 is 45 years old and has been heavily traveled. A major pavement rehabilitation project has been prepared to repave an 11-mile long segment of Freeway 99 both northbound and southbound through the City of Fresno. Completion of this project will preserve the integrity of the highway, increase motorists' safety and travel convenience, along with enhancing the movement of goods through the City of Fresno.
- Project Description:** Operation 99-Fresno will include a crack seal and asphalt concrete overlay treatment, panel replacement, inside shoulder widening and outside shoulder reconstruction. Ramp improvements will include removal and replacement of existing asphalt concrete, gore clean-up and removal of concrete curb. The exit ramp termini of the northbound off-ramps at Belmont and Herndon Avenue will be reconstructed using portland cement concrete due to heavy truck use.
- Project Limits:** Ventura Street overcrossing to Fresno/Madera County line at the San Joaquin River Bridge.
- Construction Cost:** \$20.7 million.
- Funding Sources:** State Highway Operation and Protection Program (SHOPP)
Federal and State Highway Funds
- Project Schedule:** Begin Construction: August 2001
Complete Construction: September 2002
- Agency Responsibilities:** Department of Transportation (Caltrans): design and construction management.
